Got Heat?

We are pleased to introduce 2 new **soil probe thermostats** for cables and mats.

No wiring!

Both units plug into a standard 110 volt outlet (6 ft. of cord) and will handle 12.5 amps (250' of standard cable).

Temperature settings from 4 to 38 degrees C. Model G has 2 grounded receptacles - Model GFCI has 2 ground fault circuit intercept receptacles.

Model G: \$165.00 Model GFCI: \$207.00 (order by Jan 19/11 and save 10%)

Propagating Mats (22" X 60") offer a fast set up without having to haul sand or build a bench strong enough for the sand and flats.

Just roll out the mat, put on the flats, and plug everything in.

Only \$199

Growing in tunnels? - perhaps a grove of hay? We have developed and successfully installed a **ridge roll up system** for covering/uncovering. In only minutes a single person can do what it takes a crew all morning to accomplish - talk about value!

Give us a call to discuss how we can save you money and improve the crop.

The photo shows the system adapted to our S-Series.

Our new stay rollers (for sliding doors) are designed to create the largest possible door opening with either steel or wood framed walls (1.5" to 2.75" door width).

A great value at \$12.00

Why are we still around after a decade?

- 1) We have never stopped innovating to offer you structures that are easier to build and better to grow in
- 2) We are the only greenhouse supplier that has continued to focus on greenhouses and your needs. We have never stopped evaluating and introducing new products to make you a better grower.
- 3) And because of your support! Thanks!

Delivery and taxes are extra.
